Modifications:

1. A new attribute Vaccination_center_ID is added to the vaccination_center entity and it is the key attribute and now Vaccination_center_name is not the key attribute.
2. A relationship between Volunteer and state is added, which is VOLUNTEER_BELONGS_TO.
3. As listed in the previous document, address is a multi-attribute so H.No., state, city, pincode, area are added as the constituting attributes.
4. In the state entity No_of_vaccinated_people and No_of_volunteers are made as derived attributes and attribute Due_date_of_second_vaccination from Vaccination_status is also made a derived attribute.
5. All the common attributes of both subclasses of Volunteer entity are kept as the entity of Volunteer entity itself instead of listing out them separately for each subclass and also in the n>3 relationship Volunteer entity is replaced by it's subclass Volunteers_to_vaccinate_people.
